

Jacob McQuirk;

I have lived here in Discovery Bay for 30 yrs, I have been coming here for 50 yrs.

I came her to Fish Ski and have fun in the delta area.

It was about 15 yrs age that the clifden-forbay installed new and much pore powerful pumps. To extract more water for L.A.

Since then there has been a total collapse of the Eco system. The fish population has been decimated. The entire spectrum from Striped Shad Salmon and Smelt have collapsed. The Delta is in peril because of the water exports to L.A.

The delta conservation plan has nothing to do with conservation, It is a water grab by the L.A. Water district.

I cant understand how the state water board can let this happen, this delta is being exploited by the L.A. L.A. Thirst for water has no concern for the delta. And will never stop until the Sacramento flows directly to L.A.

I went to a meeting in Bethal island last year and looked at the plan to instal these so called temporary rock dams. The plan called to raise the levy 10 ft higher and install sheer-wall. Ya temporary.

L.A. Need to Desalinate, And you need to stop the rape of the delta.
