Subject: FW: Comments on Emergency Drought Barriers

Jack McQuirk,

Your mitigated negative declaration is not adequate and doesn't deal with the possible environmental impact of these Dams.

I have lived on the delta waterways for over 25 yrs and use them in the area's you are planning to dam up during the summer months when I and the public uses the delta.

I am also concerned about salt water intrusion into the Delta and believe the proposed dams may actually make this worse not better.

In summary: why guess at the impact when a FULL Environmental Impact Report is the safe and reasonable way to go.

Thank You,
Roger Brownell
